EDITION **2027**

PAPI

100% FRENCH MADE

VOGUE ROUND, Corten finish

PAPI, a story of families

1904 In L'Isle-Adam, in the Val-d'Oise, Gilbert PAPI opens his first workshop, making advertising figurines and Terracotta and plaster statuettes for churches.

1950 Johnnie Walker, Pierrot Gourmand… manufacturing iconic advertising figures brings PAPI success in France and abroad.

1993 PAPI gains new momentum. Acquired by the FEREY family, the company develops a PAPI brand for urban planting, with a complete range of flower pots and balcony boxes designed for local authorities.

2005 The DECO round pot is born, alongside the development of ground-level planting.

2010 A recycling process is developed, for 100% recycled and recyclable manufacturing.

2015 Launch of the Corten finish.

2020 Recycling of our products collected from our customers.

2025 Introduction of the velvet finish.

TODAY

Since 1904, two families have led the company. From a terracotta figurine workshop to the pots and planters presented in the following pages, it has changed trades without changing hands. It remains independent and family-owned, based in Le Mesnil-en-Thelle, in the Oise.

MOON, Taupe (G1519), velvet finish

Rotomoulded HDPE

Rotational moulding shapes HDPE by rotation, producing sturdy, long-lasting products. The material is mass-dyed, giving excellent UV stability. Our products have a wall thickness of 3 to 8 mm, which makes them particularly strong. Our entire range also carries a 10-year corrosion warranty, ensuring long life and consistent performance in all climates.

CAREFUL HAND FINISHING AND ASSEMBLY

We place great importance on the quality of our work. Every rotomoulded piece is handled with care and inspected at each stage of manufacturing.

MANY ADVANTAGES

- French made
- 100% recycled and/or recyclable
- Frost resistant
- Shock resistant
- UV resistant
- Maintenance free
- Rot resistant

3 to 8 mm

WALL THICKNESS

10 years

CORROSION WARRANTY

COLOURS, MASS-DYED

100% recyclable and recycled

At PAPI, we give our products a second life. Since 2010, we have recycled 100% of our production offcuts, and we go further: we also take back your end-of-life pots, balcony boxes and planters to give them a new story.

Once collected, these products are cleaned, cut, shredded and micronised. The resulting powder goes back into our manufacturing cycle to create new products, including our black range, made 100% from this recycling stream.

Every product you return becomes tomorrow's raw material. A virtuous circle that makes each planter a step towards sustainable, responsible production.

Together, we turn today's waste into tomorrow's solutions.

OUR PRODUCTS' LIFE CYCLE

SPECIAL **FINISH**

CORTEN

THE PATINA OF STEEL

A texture shaped by hand, piece by piece.

VOGUE ROUND, Corten finish

Corten effect

Inspired by Corten steel, this finish reproduces its weathered look and characteristic shades while keeping all the advantages of rotomoulded HDPE.

Applied entirely by hand, it gives each piece a unique appearance. Variations in tone and shade are an integral part of this handcrafted finish and add to its character.

Unlike Corten steel, the product retains all the properties of HDPE: light weight, easy handling and low heat absorption. A real advantage on large pieces.

The Corten finish combines the warm, authentic look of weathered metal with the durability and practicality of HDPE.

Hand-applied finish
Available across the range, except the Dune, Milano and Ora models.

MILEO, Corten finish

Detail, Corten finish

SPECIAL **FINISH**

VELVET

A UNIQUE TOUCH, REVEALED BY HAND.

A soft touch, achieved by hand by our specialist technicians.

ATOLL, Olive green (V712), velvet finish

Velvet effect

Soft to the eye and to the touch, the Velvet finish gives HDPE a subtle, refined matt look. It brings out the product's lines and gives it a delicate texture that is particularly pleasant to touch.

Applied entirely by hand by our technicians, this finish transforms the look of the material and gives a lighter shade than the original colour, while keeping the identity of the chosen colour.

The Velvet finish keeps all the qualities of rotomoulded HDPE, combining elegance, strength and durability for both indoor and outdoor use.

Hand-applied finish
Available in every colour of our chart.

ROUND DESIGN, Olive green (V712), velvet finish

MOON, Taupe (G1519), velvet finish

Aquatic version

Designed as decorative water features, our aquatic version pots* have no drainage hole, ensuring they are fully watertight. This option turns each container into a small water feature, ideal for water lilies and aquatic plants, or for creating a natural ecosystem.

The design stays the same, but the uses widen: playing with water, depth and planting, the aquatic option opens a new, calm and poetic landscape dimension. Thanks to the strength of HDPE (high-density polyethylene), the structure stays solid while remaining watertight for long-term outdoor use.

* Only available on ATOLL (p. 17) and RODEO (p. 31).

ATOLL, aquatic version

TESTIMONIAL

“A miniature water feature doesn’t need a large garden: an elegant PAPI Mobilier bowl with aquatic plants creates a living focal point on any terrace. Choosing suitable plants is essential for balance and refinement throughout the season: a small water lily, marginal grasses and oxygenating plants make up a harmonious, lasting ecosystem.”

Clémence TREMBLAIS,
Co-Director of Aquamoine, aquatic plant specialist

OPTION

The LEVTOUT

- Pots on the move: relocate our pots wherever you like, without damage.
- The LEVTOUT strap lifting system fits all our pots except RODEO

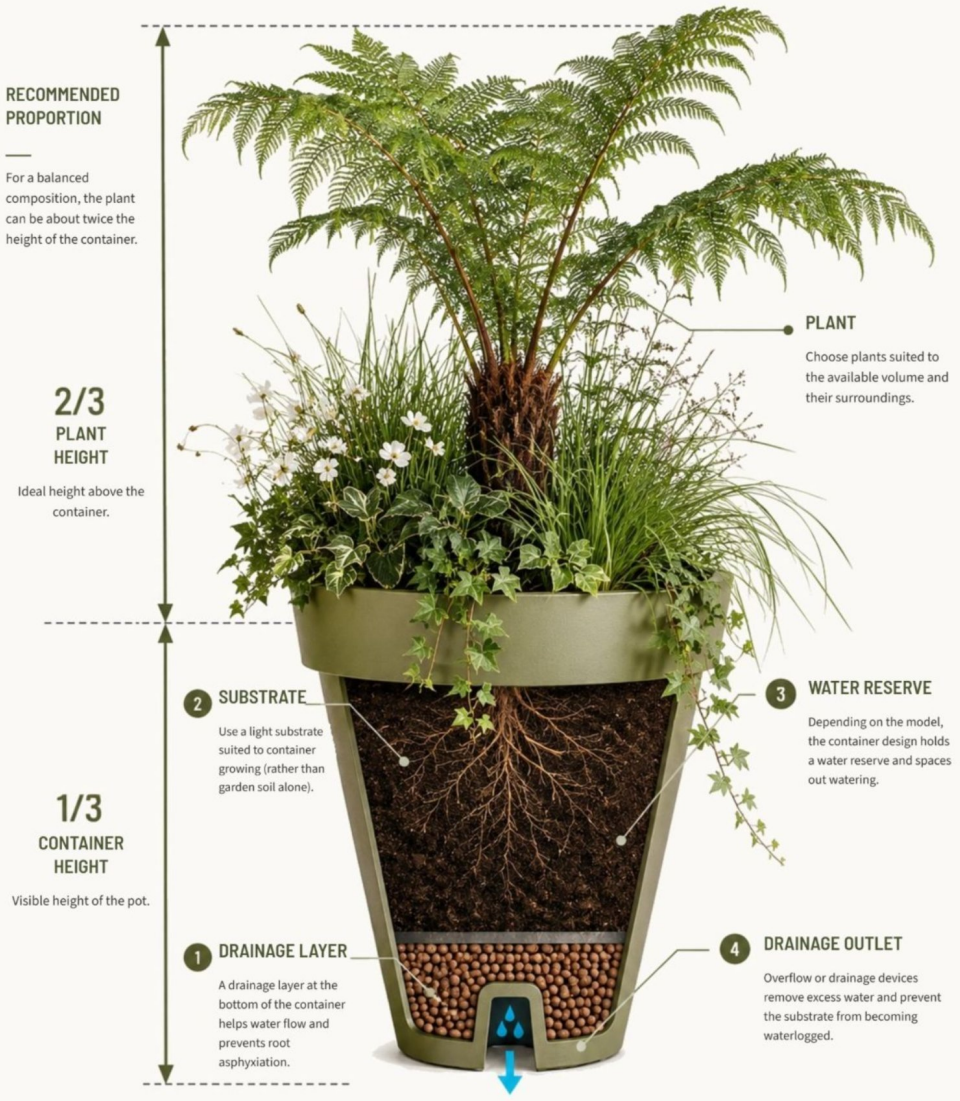
How does it work?

Fixing

- Anti-tip fixing: availability is shown under options on each product page
- Ground anchor plate, optional

The container serving the plant

Successful planting depends on the right balance of substrate, drainage, water and available volume.



KEYS TO SUCCESSFUL PLANTING

WATER

Control watering and ensure good drainage.

SUBSTRATE

Choose a suitable, free-draining, airy mix.

VOLUME

Size the container to the plant’s growth.

STRAIGHT, STRADDLING AND CURVED BALCONY BOXES

1 WATER RESERVOIR

The inner container creates a water reservoir beneath the substrate, available to the plant.

2 SUBSTRATE

Use a light substrate suited to container growing (rather than garden soil alone).

3 IRRIGATION CLOTH (NOT SUPPLIED)

A fine geotextile spreads water by capillary action to feed the substrate evenly.

4 DRAINAGE / OVERFLOW

Overflow devices remove excess water and prevent the substrate from becoming waterlogged.

NEO, MILANO AND LINEO PLANTERS

1 WATER RESERVOIR

Drill the sides of the inner container at the desired height, add clay balls, then lay the irrigation cloth.

2 SUBSTRATE

Use a light substrate suited to container growing (rather than garden soil alone).

3 IRRIGATION WICKS (NOT SUPPLIED)

Very fine geotextile wicks draw water from the reservoir up into the substrate to feed the plants.

4 IRRIGATION CLOTH (NOT SUPPLIED)

A very fine geotextile cloth that spreads water evenly across the reservoir.

Our planters and inner containers are supplied undrilled, so you can adapt them to your planting.

COLLECTION **BOWLS 2027**

ATOLL

THE ICONIC BOWL

Six sizes and two subtly different shapes, for harmonious arrangements suited to every space.

COLLECTION **PLANTERS 2027**

MURANO

THE WALL PLANTER

A planter that mounts on a wall, stands on the ground or sits in the ground, and draws water from existing gutters.

MURANO, Terracotta (TC)

WALL VERSION

FLOOR VERSION

BOTTOMLESS VERSION

FRENCH MADE

100% RECYCLED AND RECYCLABLE

MURANO

Ref.: MURANO

TECHNICAL SPECIFICATIONS

- Wall pot in 100% recycled and/or recyclable rotomoulded HDPE
- 30 L water reservoir and 50 L soil volume, sized for a climbing plant to thrive for several weeks without refilling
- Three installation modes: wall-mounted, free-standing or sunk into the ground
- Bottomless model available for planting directly in the ground
- Clay balls (not supplied): placed in the column and immersed in the reservoir, they draw water up to the substrate by capillary action

OPTIONS

- Gutter connection: the reservoir fills automatically from existing downpipes
- I.C.O.® removable support: a patented vertical greening solution by Pépinières Javoy, combining a removable support, bracket and climbing plant

TESTIMONIAL

"We chose MURANO planters for our patented ICO® removable façade greening solution. Their large capacity gives plants ideal room to grow and an anchorage perfectly suited to our innovation. Their look adds a discreet, elegant touch, while letting ICO® and our climbers take centre stage."

Marie-Laure RAULINE,
Co-Manager of Javoy, climbing plant specialist

SPECIAL FINISH

Corten p. 9

HOW THE WATER RESERVOIR WORKS

1 **WATER RESERVOIR**
Double wall, reservoir built into the lower section. Filled by normal watering or via a gutter (optional).

2 **CLAY BALL TUBE**
The central tube draws moisture up to the substrate by capillary action. It stops at the reservoir's highest level.

3 **SUBSTRATE**
Light substrate suited to container growing.

4 **PLANT**
Plants suited to the available volume and their surroundings.

OVERFLOW
Located at the back of the planter.

5 **GUTTER**
A gutter can be connected to the planter to fill the water reservoir automatically.

COLLECTION **COMPOSTER 2027**

HEDGEHOG

THE ROTATING COMPOSTER

A rotating composter with two 100-litre compartments, designed for educational and shared composting.

HEDGEHOG, Olive green (V712)

FRENCH MADE

100% RECYCLED AND RECYCLABLE

GROUND ANCHORING

TWO 100 L COMPARTMENTS

HEDGEHOG

Ref.: HERISSON

TECHNICAL SPECIFICATIONS

- Two 100 L compartments in 100% recycled and/or recyclable HDPE, galvanised steel frame
- Two independent doors, each with an instruction sticker: “What goes in?” and “How does it work?”
- Date indicator at each end to record the fermentation date
- Two hatches that lock and open independently, for two sealed, pest-proof compartments
- Ground fixing (screws not supplied)

OPTIONS

- Educational composting mat in flexible lino
- Security keys to lock the doors

HOW THE WATER RESERVOIR WORKS (version on feet only)

How our planter works

1 Substrate
Compost suited to kitchen gardens (vegetables, herbs, soft fruit…).

2 Clay balls
In immersed cones. They draw water up to the substrate by capillary action.

3 Water reservoir
Provides several weeks of autonomy.

4 Water gauge
Shows the water level in the reservoir.

5 Filling connector
From underneath (standard garden hose).

6 Overflow
Drains excess water outside (located under the planter, near the filling connector).
